The invention relates to identifying (M1) a candidate p53 pathway

C modulating agent, by contacting an assay system comprising a purified HM

CD polypeptide (human orthologue of genes that modify the p53 pathway in no prosophila) or nucleic acid with a test agent under conditions, where but brosophila or nucleic acid with a test agent under conditions, where but c activity, and detecting a test agent, the system provides a reference of the test agent, the system provides a reference c activity, and detecting a test agent-biased activity of the assay system.

CC activity, and actecting a test agent-biased activity of the assay system.

Also included are modulating (M2) a p53 pathway of a cell (comprising contacting a cell defective in p53 function with a candidate modulator contacting a cell defective in p63 function is restored), modulating (M3) a p53 pathway in a mammalian cell (comprising contacting the cell with an agent that specifically binds an HM polypeptide or nucleic acid) and diagnosing (M4) a disease in a patient (comprising; (a) obtaining a biological sample contacting the sample with a probe for HM expression contents and the results with a control; and (d) determining whether the comparison indicates a likelihood disease). (M1) is useful for identified by (M1) are useful in a variety of diagnosing breast, colon, kidney, lung and ovarian cancer, therapeutic applications, where disease or disorder prognosis is related to defects in the p53 pathway, such as, anglogenesis, apoptotic or cell proliferation of the cell, so that the cell undergoes normal contents appsible to the cell, so that the cell undergoes normal contents application or progression through the cell undergoes normal contents appetute acid encoding a p53 pathway of a cell, thus restoring the p53 pathway such as anglogenic or cell proliferation disorders. The present sequence is an HM concleic acid encoding a p53 pathway modifying protein
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   181 ATCCTCAGCTCTGGGCCTCAGAACTGTGCTGCTGTGTTCACGAGGGCATATATGAAGAA 240

```
novel isolated protein complex comprising a polypeptide selected from a Gag protein, a n, myosin, Hsp60, Hsp90, STAMI, STAMISA, an E2 enzyme, tsg101, a cullin, RING-SH, and a complex has virucide activity and can be used of a vaccine. The protein complex and detecting cells infected with a virus, for ntiviral activity, and for treating viral ntiviral activity, and for treating viral ruses, rhabdoviruses, or filoviruses. This DNA sequence relating to a protein comprising invention.

 or as target molecules for gene therapy
                                                              The present invention relates to novel human secretory or membrane proteins (ADA54072-ADA55710) and their coding sequences (ADA52433-ADA54071). The coding sequences are useful in the gene therapy of diseases caused by abnormalities of the proteins, e.g. cancer, inflammatory diseases, osteoporosis or neurological disease.

The present invention describes a method for examining ischaemic conditions, comprising measuring the expression levels of particular genes (1) in a test sample odetermining the expression profile of a gene group in the sample comprising genes selected from (T). The method is useful for examining the ischaemic condition (e.g. compressive ischaemia, occlusive ischaemia or vasospastic ischaemia) by measuring expression levels of particular genes (AB199202 to AB19912, encoding the protein sequences in ABB57020 to ABB57374) or by determining the expression profile of a gene group comprising these genes. The expression lindicator when screening for ischaemic condition. Improving drugs or therapeutics for ischaemic diseases. AB199913 and AB199914 represent PCR primers for a mouse ischaemic ondition related sequence, which are used in the exemplification of the present invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        543
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              107
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             120

                                                                                                                                                                                                                                                                                                   A cDNA clone (AAT12262) coding for tumour necrosis factor receptor associated factor 2 (TRAF2) (AAR90578) was isolated using a yeast two-hybrid system to assay for proteins that associate with the intracellular domain (ID) of tumour necrosis factor receptor type 2 (TNF-R2). The cDNA is used for produ. of recombinant TRAF2, a new factor capable of specific association with TNF-R2 ID and CD40

The invention relates to a complex between two interacting proteins in adipocyte cells, given in the specification. The proteins are identified by selecting a bait protein from a known adipocyte marker and then performing a past 2-hybrid selection to isolate prey proteins encoded by members of an adipocyte cDNA library. The proteins are designated SID (RTM) (selected interacting domains) proteins. Also included are a polymorlectide encoding a polypeptide in the adipocyte cells, a combinant host cell expressing at least one of the interacting polypeptides of the comprising any of the 738 amino acid sequences given in the specification (including its fragment or variant), a solution in the specification (including its fragment or variant), a vector comprising the SID (RTM) polymorlectide, a recombinant host cell comprising the vector, a protein chip comprising the polypeptides, polymorlectides and compounds are useful for preventing or treating metabolic disorders such as obesity or diabetes. The complex, polymorlectides and compounds are useful for preventing or treating metabolic disorders such as obesity or diabetes. The polymorlectides and compounds are useful for particularly useful for identifying selected interacting domains (SID (RTM)) for screening drugs that medulate the protein interaction, thus contain the therapeutic effect. The present sequence encodes a SID (RTM) between the protein interaction, thus the propertion of the difference of the difference of the companion of the substituting the polymorlectides and compounds are useful for the therapeutic effect. The present sequence encodes a SID (RTM) that there are sequences are sections of the sequence and the sequence of the sequence and substituting the polymorlectides and the sequence and sequence and substituting the sequence and sequence and sequences are substitutions and sequences are settles that the sequences are 
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      444

                  A DNA sequence (AAT31274) codes for a novel B-cell protein (AAW03147) induced by Epstein-Barr virus (EBV) infection, termed Epstein-Barr induced protein 6 or EB16. The protein appears to be the human homologue of murine tumour necrosis factor receptor (TNFR) associated factor TRAF1. The gene can be used in gene therapy protocols for controlling TRAF-mediated TNFTNFR signal transduction, or for the prodn. of EB16 polypeptides that inhibit LMP1-TRAF interaction for use in treating infection and controlling cell growth/tumourigenesis associated with LMP1-encoding viruses, partic. EBV
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     646 AGGGTGGCCATGACTGCCGAGGCCTGCAGCCGGCAGCACCGGCTGGACCAAGACTT 705
